Printing Process						

1. Image Printing

Take your image from a digital camera, a scan, or a memory card or designed by yourself, then print it out through Epson inkjet printer using sublimation ink and sublimation paper.

Note: Choose mirror image printing

2. Image Cutting

Select your favorite image and cut the printed paper in a proper size.

Note: The size should be a bit larger than the size of the printing sheet.

3. Blank Printing Sheet Preparation

Tear off the protection film covering on the printing sheet

4. Printed Image Fixed

Make sure the printed paper can fit for the printing sheet. Then, fasten them by thermal tapes.

Note: the side of printing sheet should be covered completely by the printed paper.

5. Transferring

Place the printing sheet covered with printed paper on the silicon mat of the flat heat press. Use the proper pressure and turn on the flat heat press, set the temperature at 180c and time 120s. When the temperature rises up to 180c, press down the heating board and the sublimation process starts.

6. Transferring Finished

When the time is up, pull up the heating board. Then remove the paper and your customized image will be transferred on the sheet.

7. Final Smart Device

Tear down the sticker on the cover and place the printed sheet in the cover, then a unique device you can get
